IEE PROCEEDINGS-SOFTWARE

In partnership with the IET, we are able to offer IEE Proceedings-Software, a bi-monthly journal for practitioners, researchers and managers engaged in software engineering.

The scope includes development methods and tools, formal methods, high reliability systems, management of software development and software engineering training.

Abstracted in INSPEC, DBLP and ISI, the journal goes to a large number of institutions and individuals worldwide as one of the twelve journals in the prestigious IEE Proceedings package, with a further benefit to authors seeking the widest possible readership being the journal's presence in the widely subscribed-to IET/IEEE Electronic Library (IEL).

Regularly appearing special issues on current and emerging issues lead by an expert editorial board member are a new feature. See IEE’s Forthcoming Special Issues for the latest calls for papers or order a sample copy of a previously published special issue by going to IEE's Published Special Issues.

The journal has built up access to a top-quality base of reviewers and aims for publication within twelve months, decision within six, with papers being published online when ready ahead of printed publication.

IEE Proceedings Software is now available on the IET Digital Library.
