Nursing technology and elephants: IT can save us

Peter Jones, Chorley Hospital Chorley, Lancashire

Key words: clinical practice, Information technology, environment,

Summary

The third paper in a series of three providing contrasting perspectives of technology. The views are derived from the analogy of three blind men trying to get to grips with an elephant: as a beast of burden, as a dangerous serpent, or as a rope thrown to save humanity. This paper focus on the third blind man who, hanging on the elephants tail, "sees" a rope thrown to save humanity.
