

# Finding the Right Audio Content for You

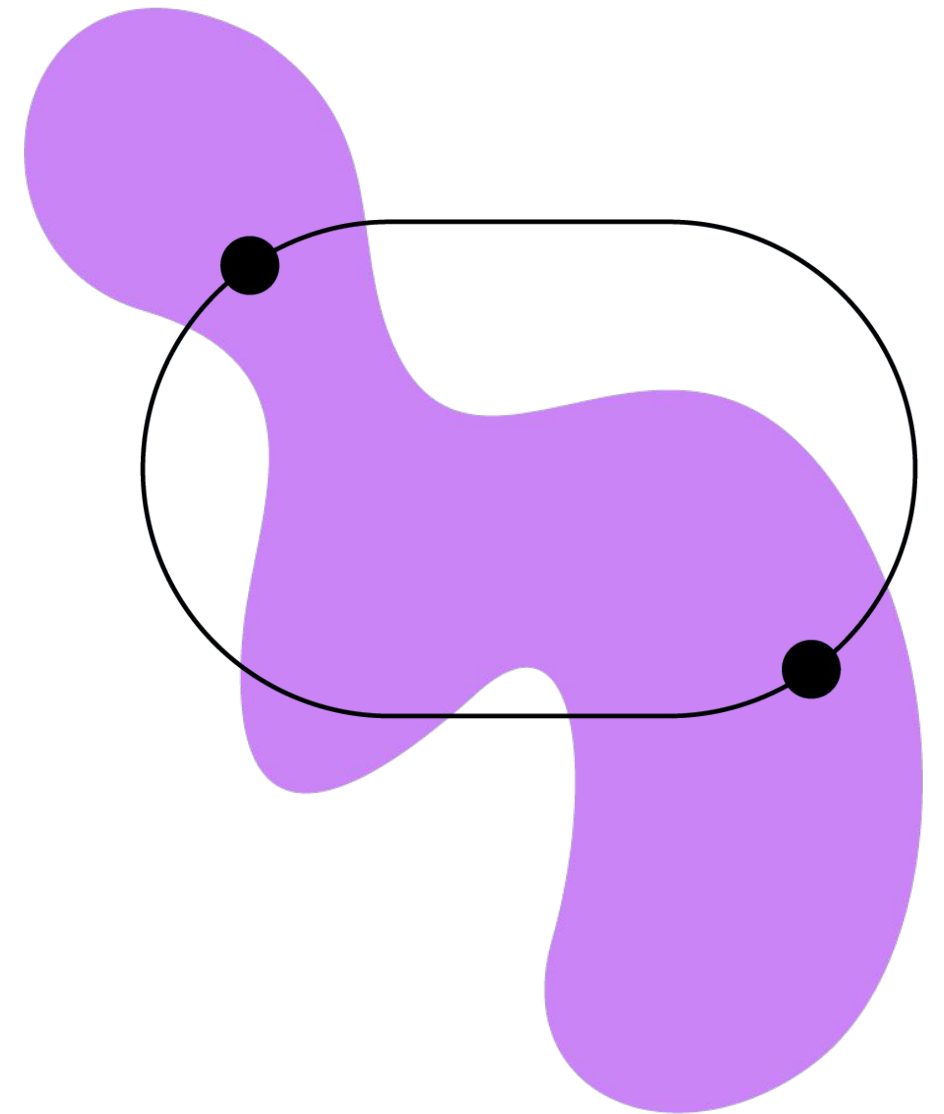

**Brammert Ottens**

On behalf of great teams at Spotify

Our mission

**To unlock the potential of human creativity,**  
by giving a million creative artists the opportunity to live off of their work,  
and billions of fans the opportunity to enjoy and be inspired by it.

# The Search Journey

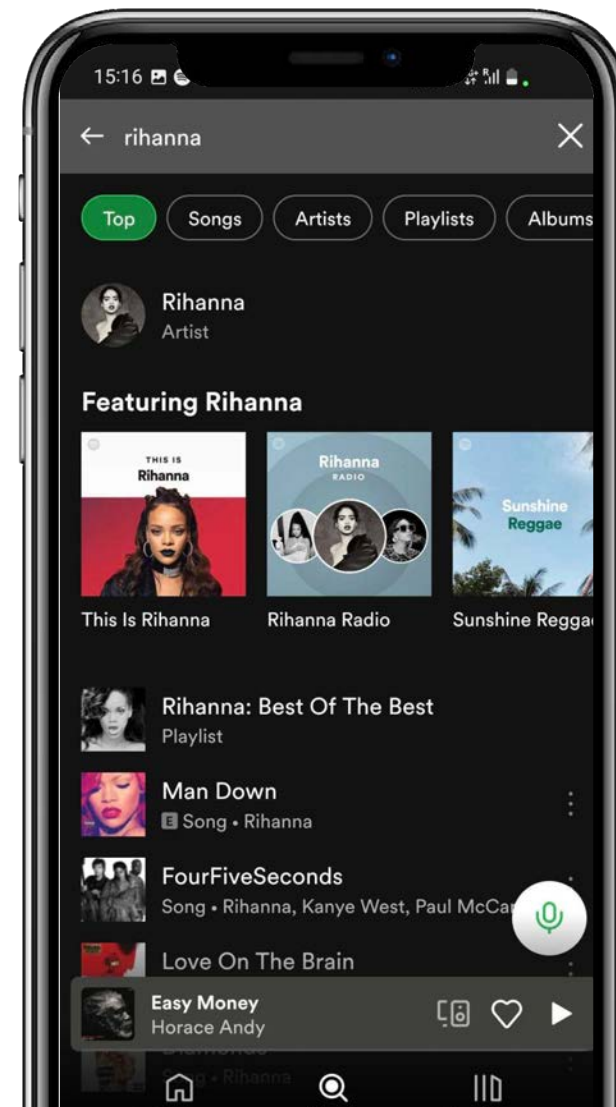

## TYPE/TALK

User communicates with  
US

## CONSIDER

User evaluates what we  
show them

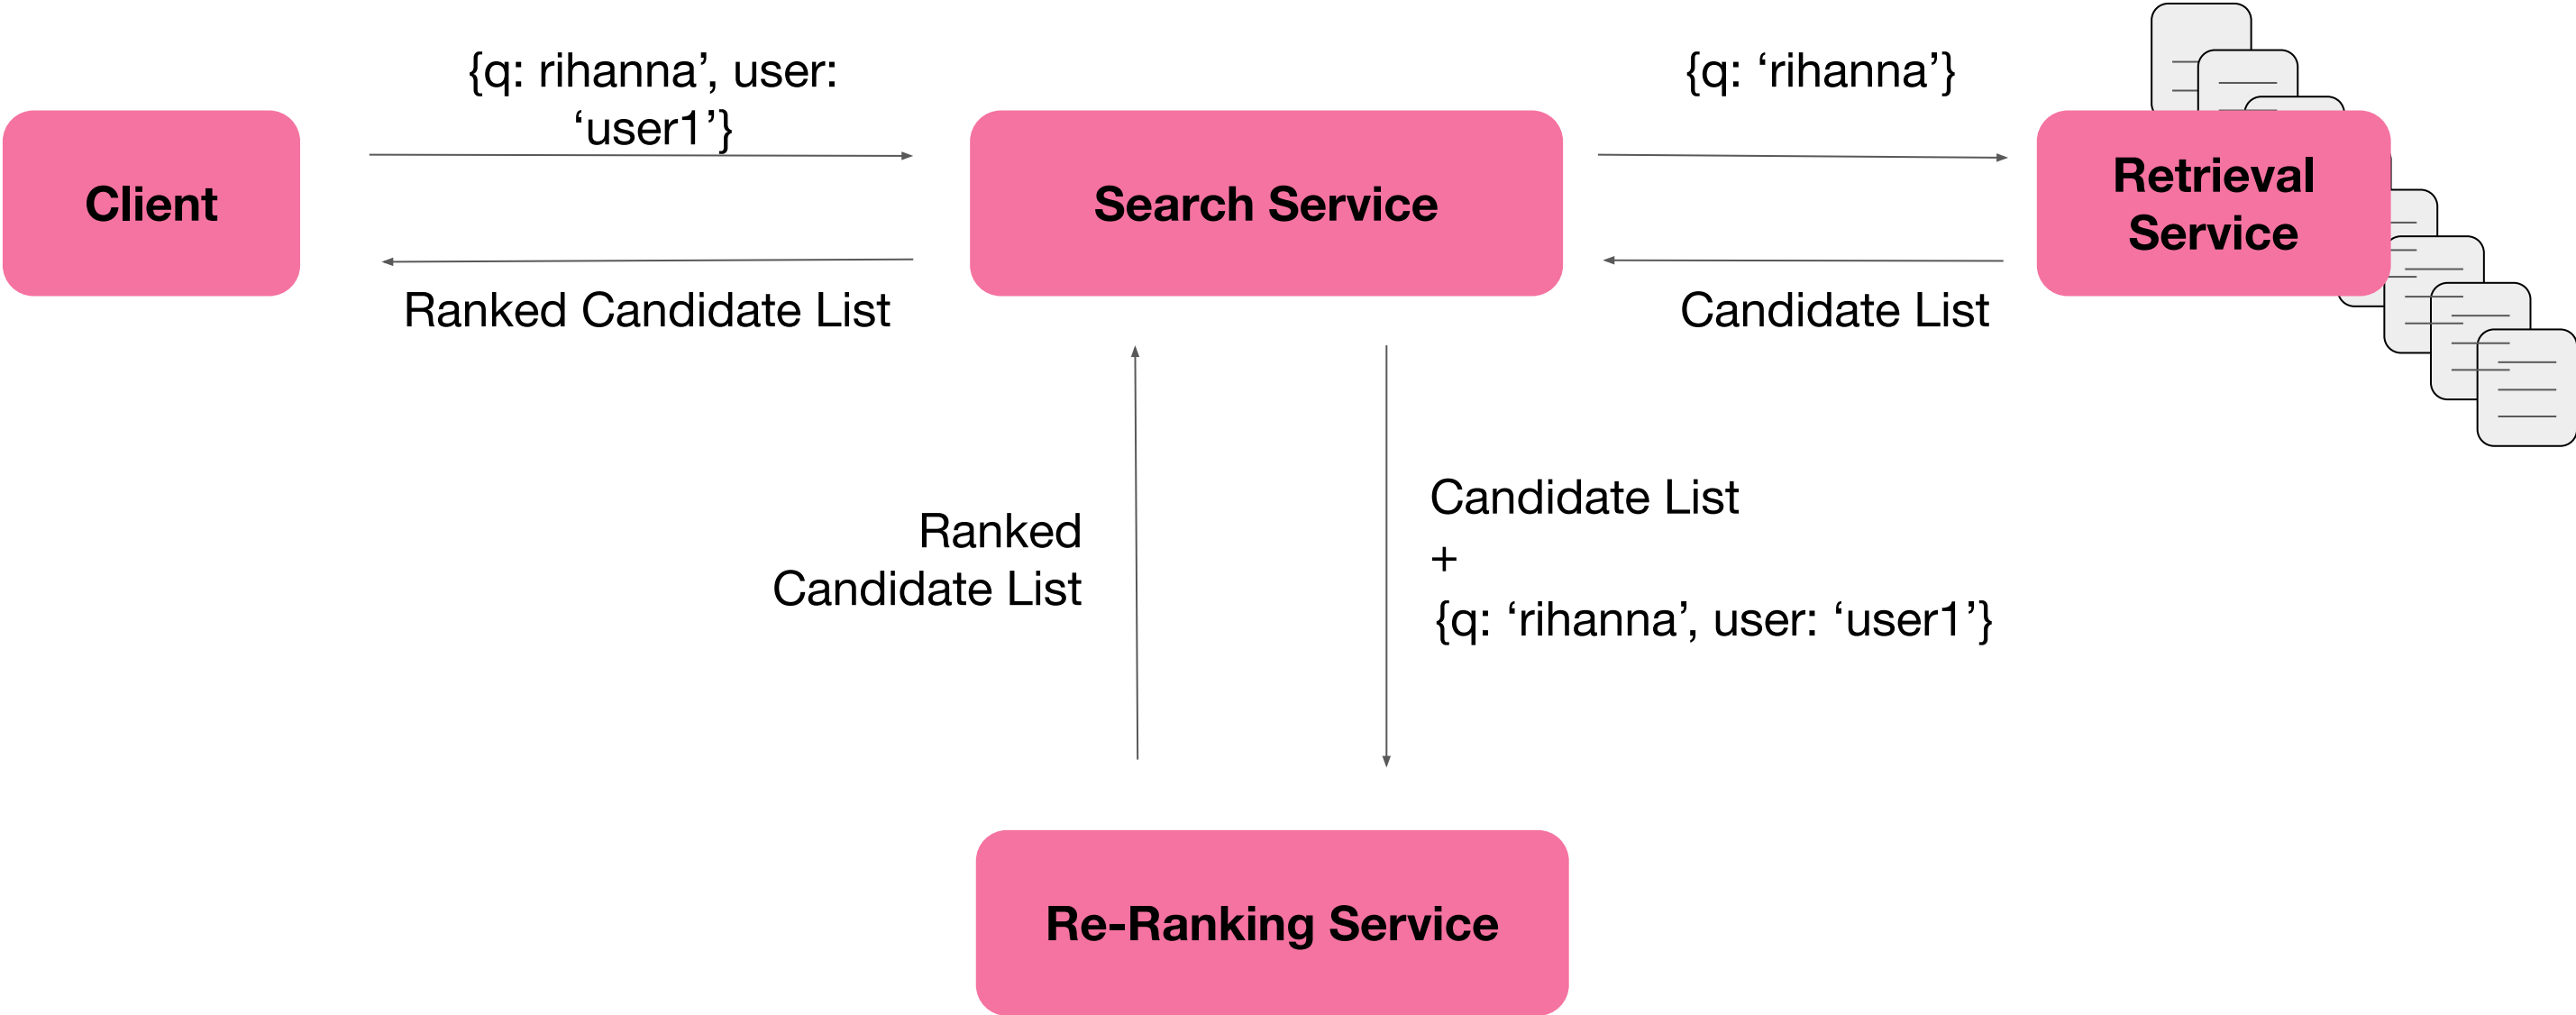

## DECIDE

User ends the search  
session

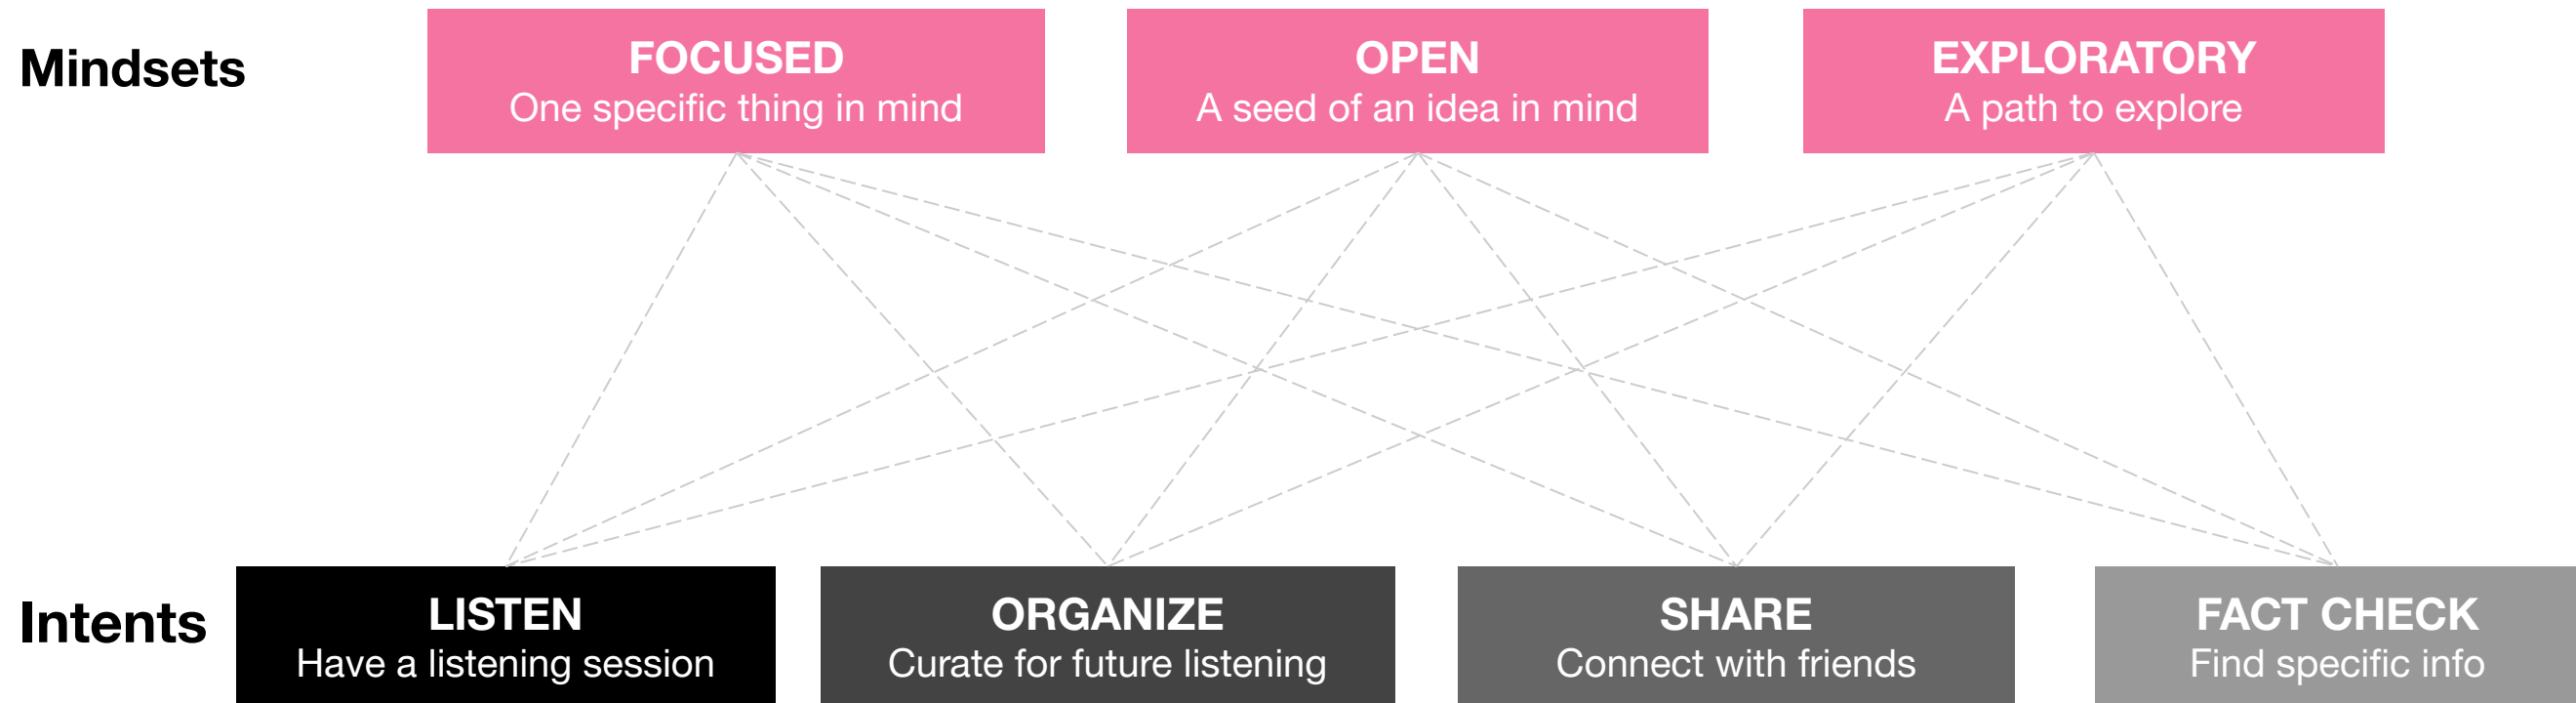

# High level architecture

# Metrics

# Listeners come to Spotify with different *mindsets* and *intentions*

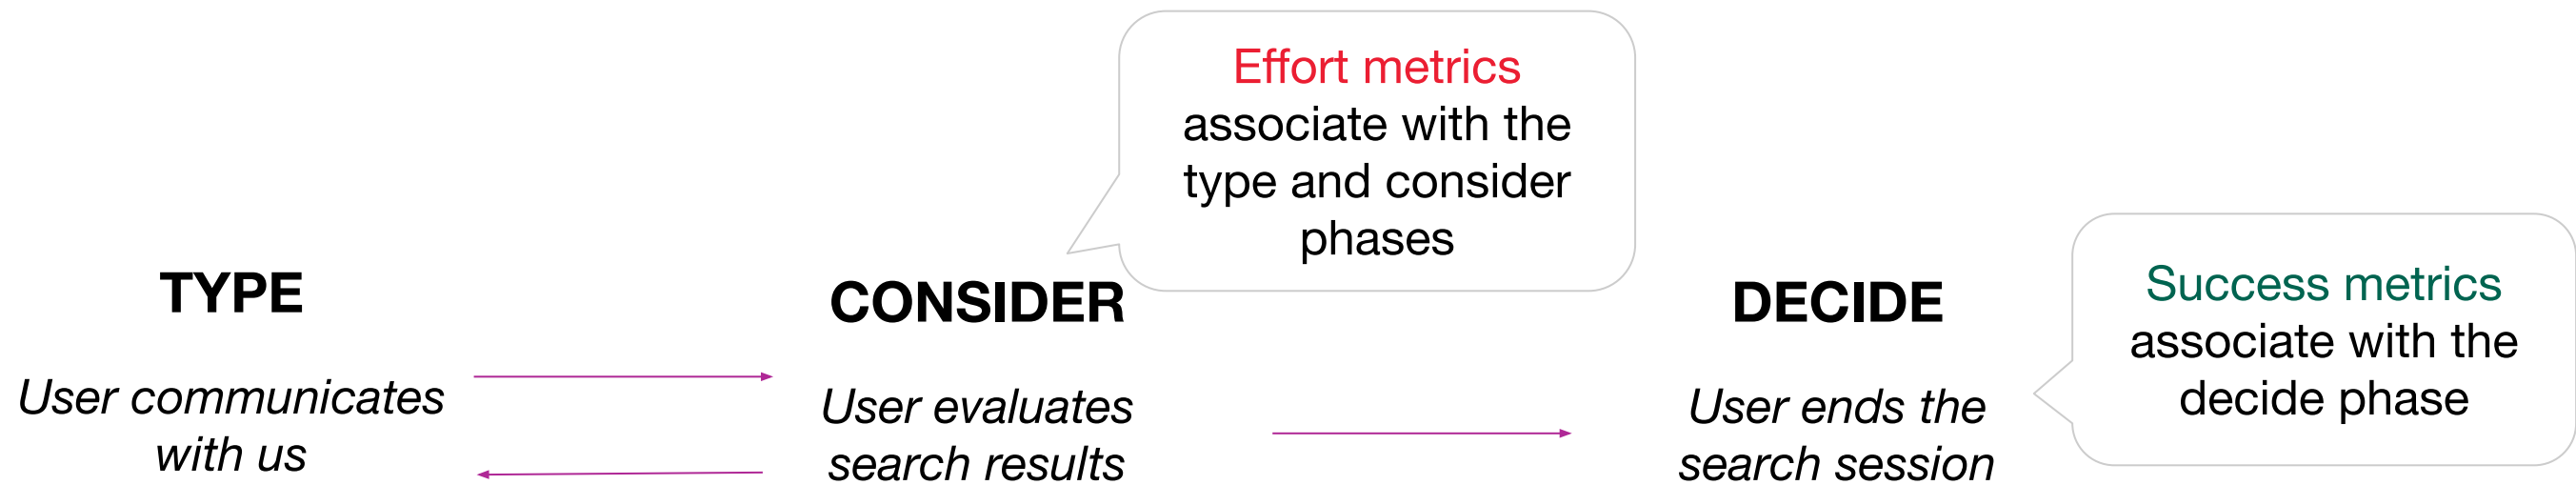

Search Satisfaction  $\cong$

SUCCESS  $\Delta$  EFFORT =

DECIDE metrics  $\Delta$  (TYPE metrics  $\oplus$  CONSIDER metrics)

### EFFORT METRICS

- # character deletions
- session duration
- # reformations before success in a search session
- ...

### SUCCESS METRICS

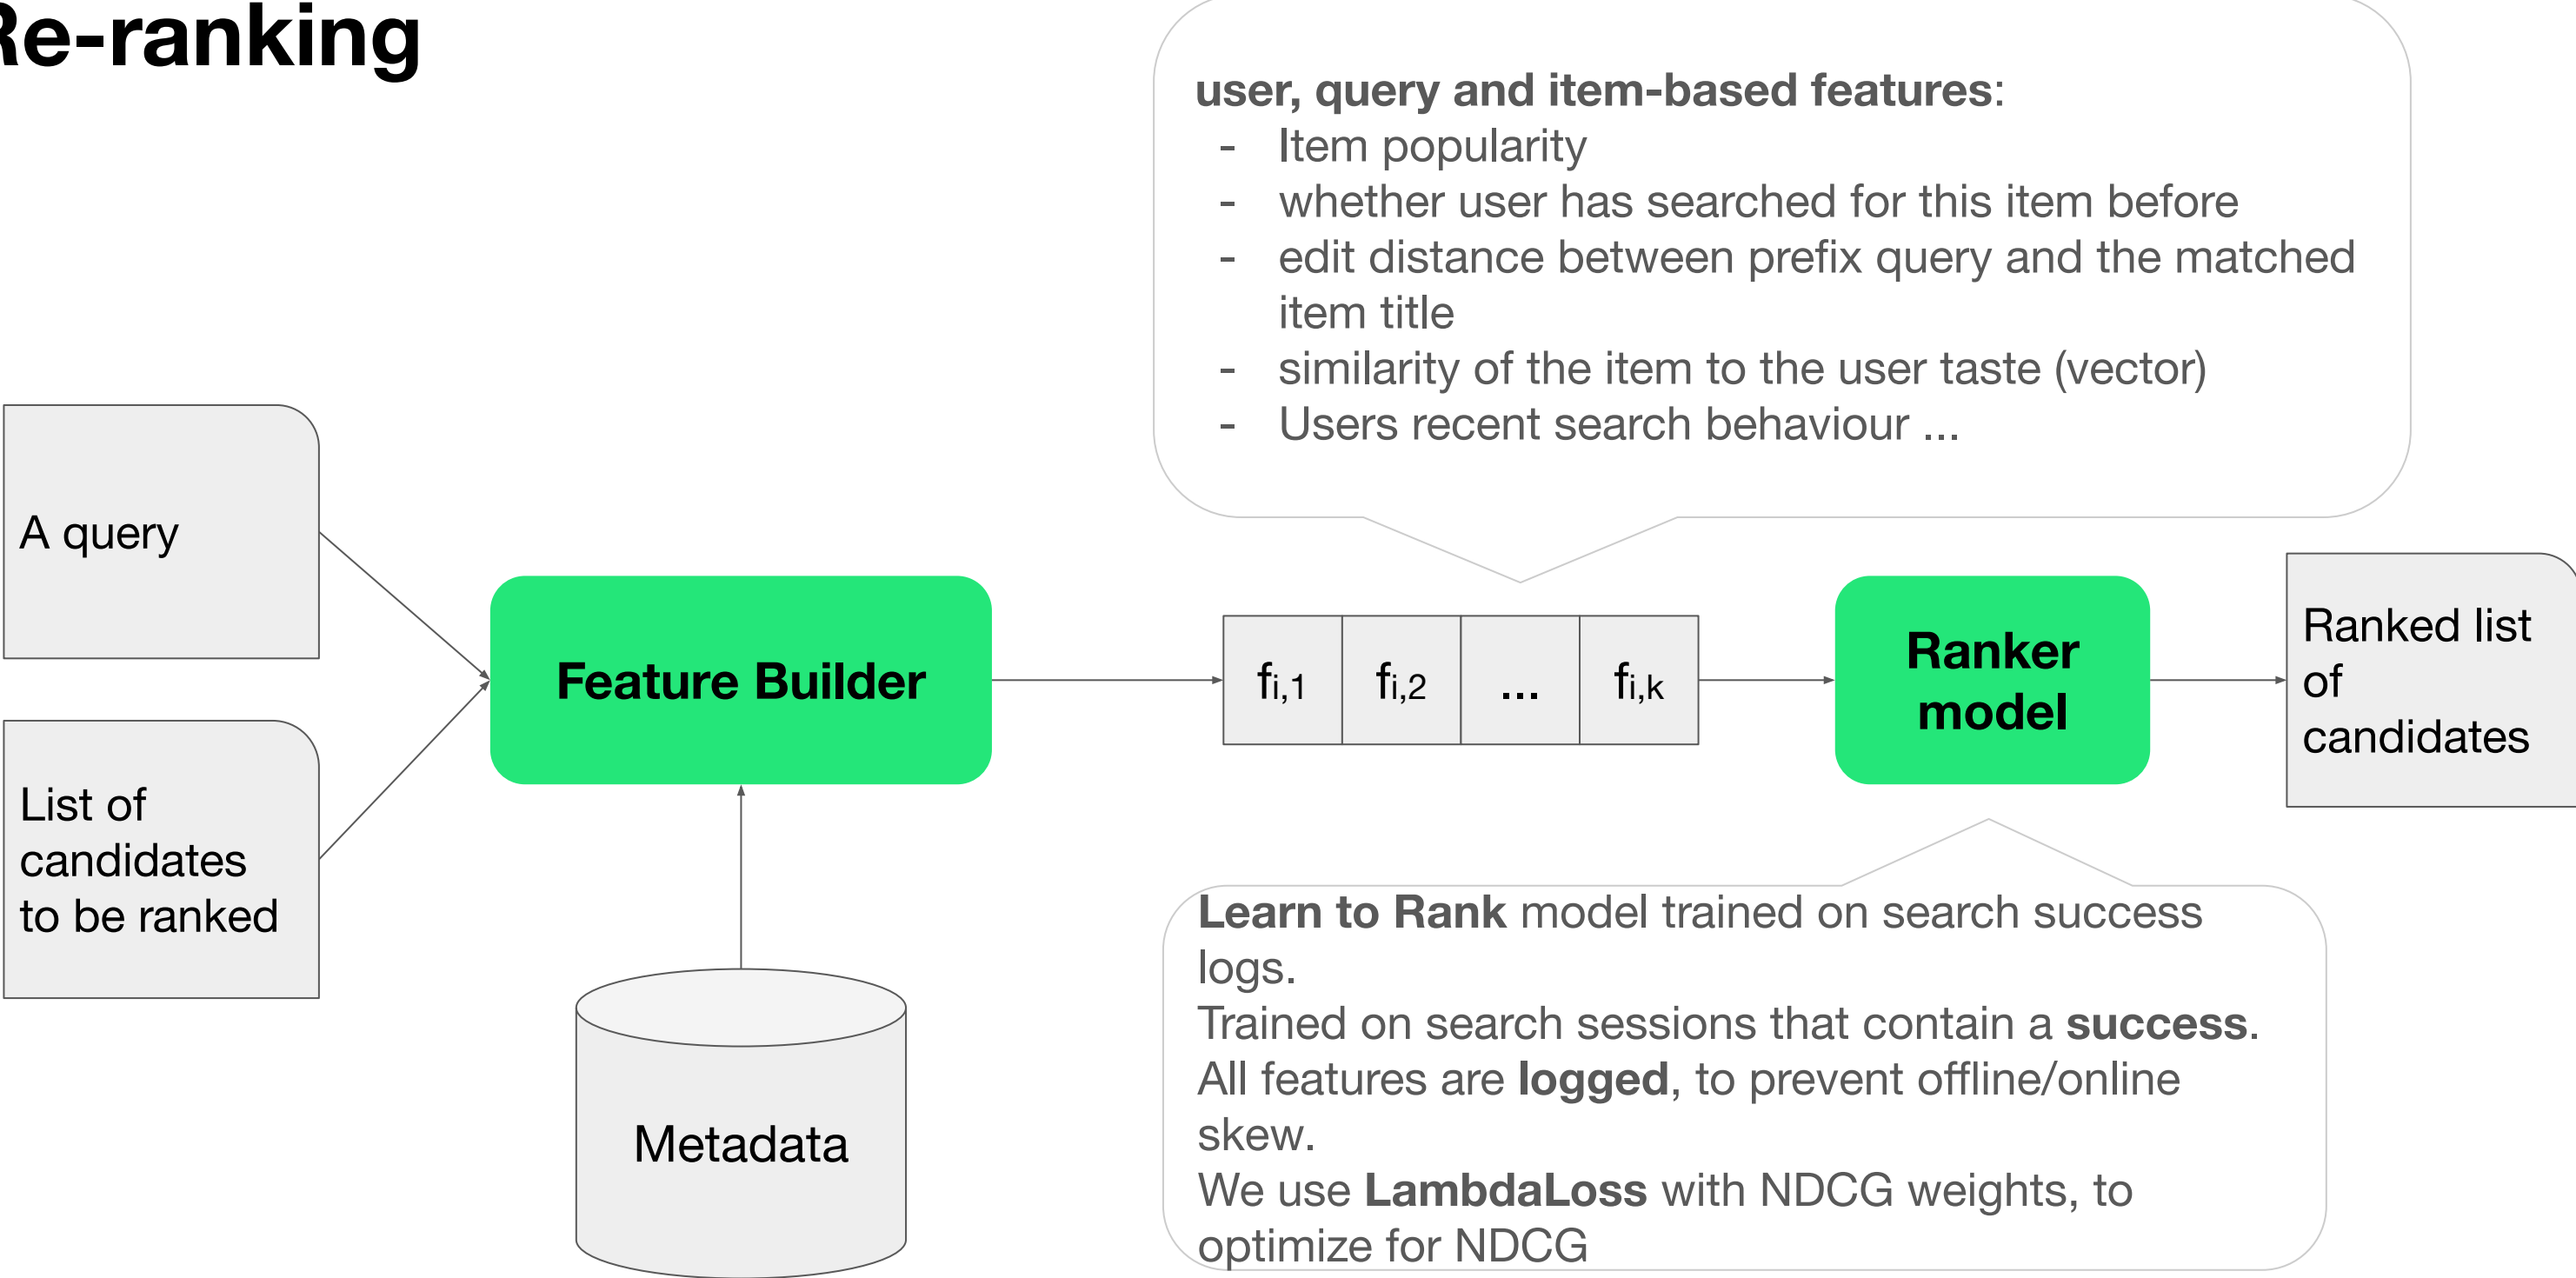

**Listen goal:** stream

**Organize goal:** add to a playlist, save to collection, follow artist/playlist, download

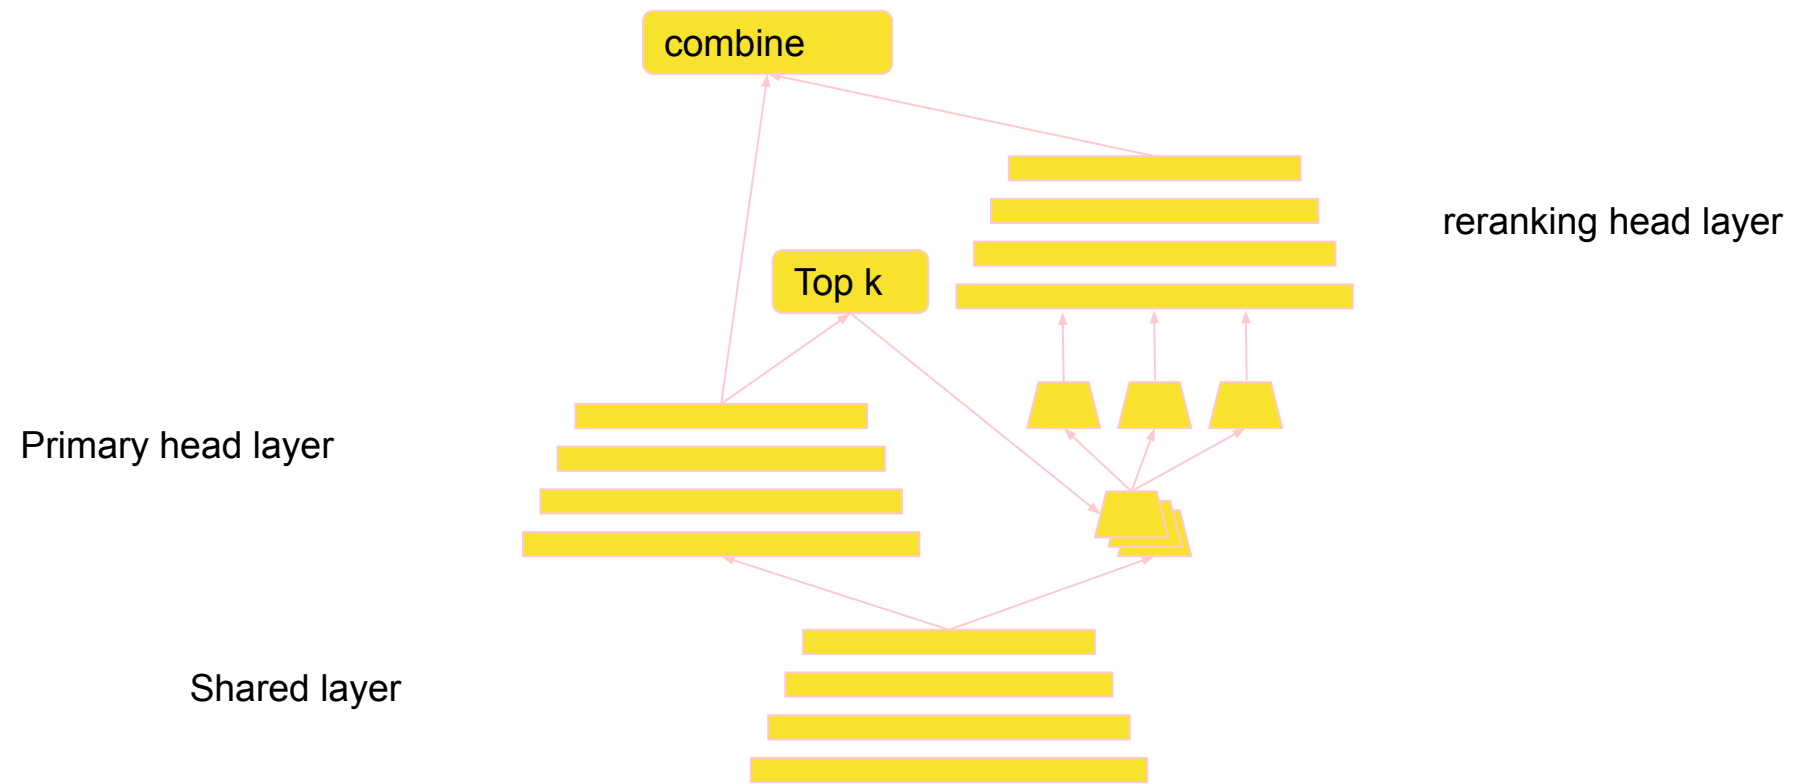

**Share goal:** share link

**A diverse catalogue**

One list to rule them all

## We need to rank many different types of content

- We have vectors for some types of content, but not all
- Success for music queries looks different from success for podcast queries
- Not all features are available for all different content types

# Short Queries

# Short Queries

- Most queries we see are short, and thus not very informative and ambiguous.
- Personalization works very well for *known intent* searches
- Open searches are a challenge for instant search

# Music & Podcasts

# Differences in behavioural patterns

## *Relative difference in success metrics*

Stream	+3%
Add to collection	+30%
Add to playlist	-59%
Follow artist	-92%
Download	+593%
Share	+44%

## *Relative difference in effort metrics*

Average relative character deletions	+53%
Average query length in characters	+13%

# Differences in behavioural patterns

## Relative difference in success metrics

Stream	+3%
Add to collection	+30%
Add to playlist	-59%
Follow artist	-92%
Download	+593%
Share	+44%

## Relative difference in effort metrics

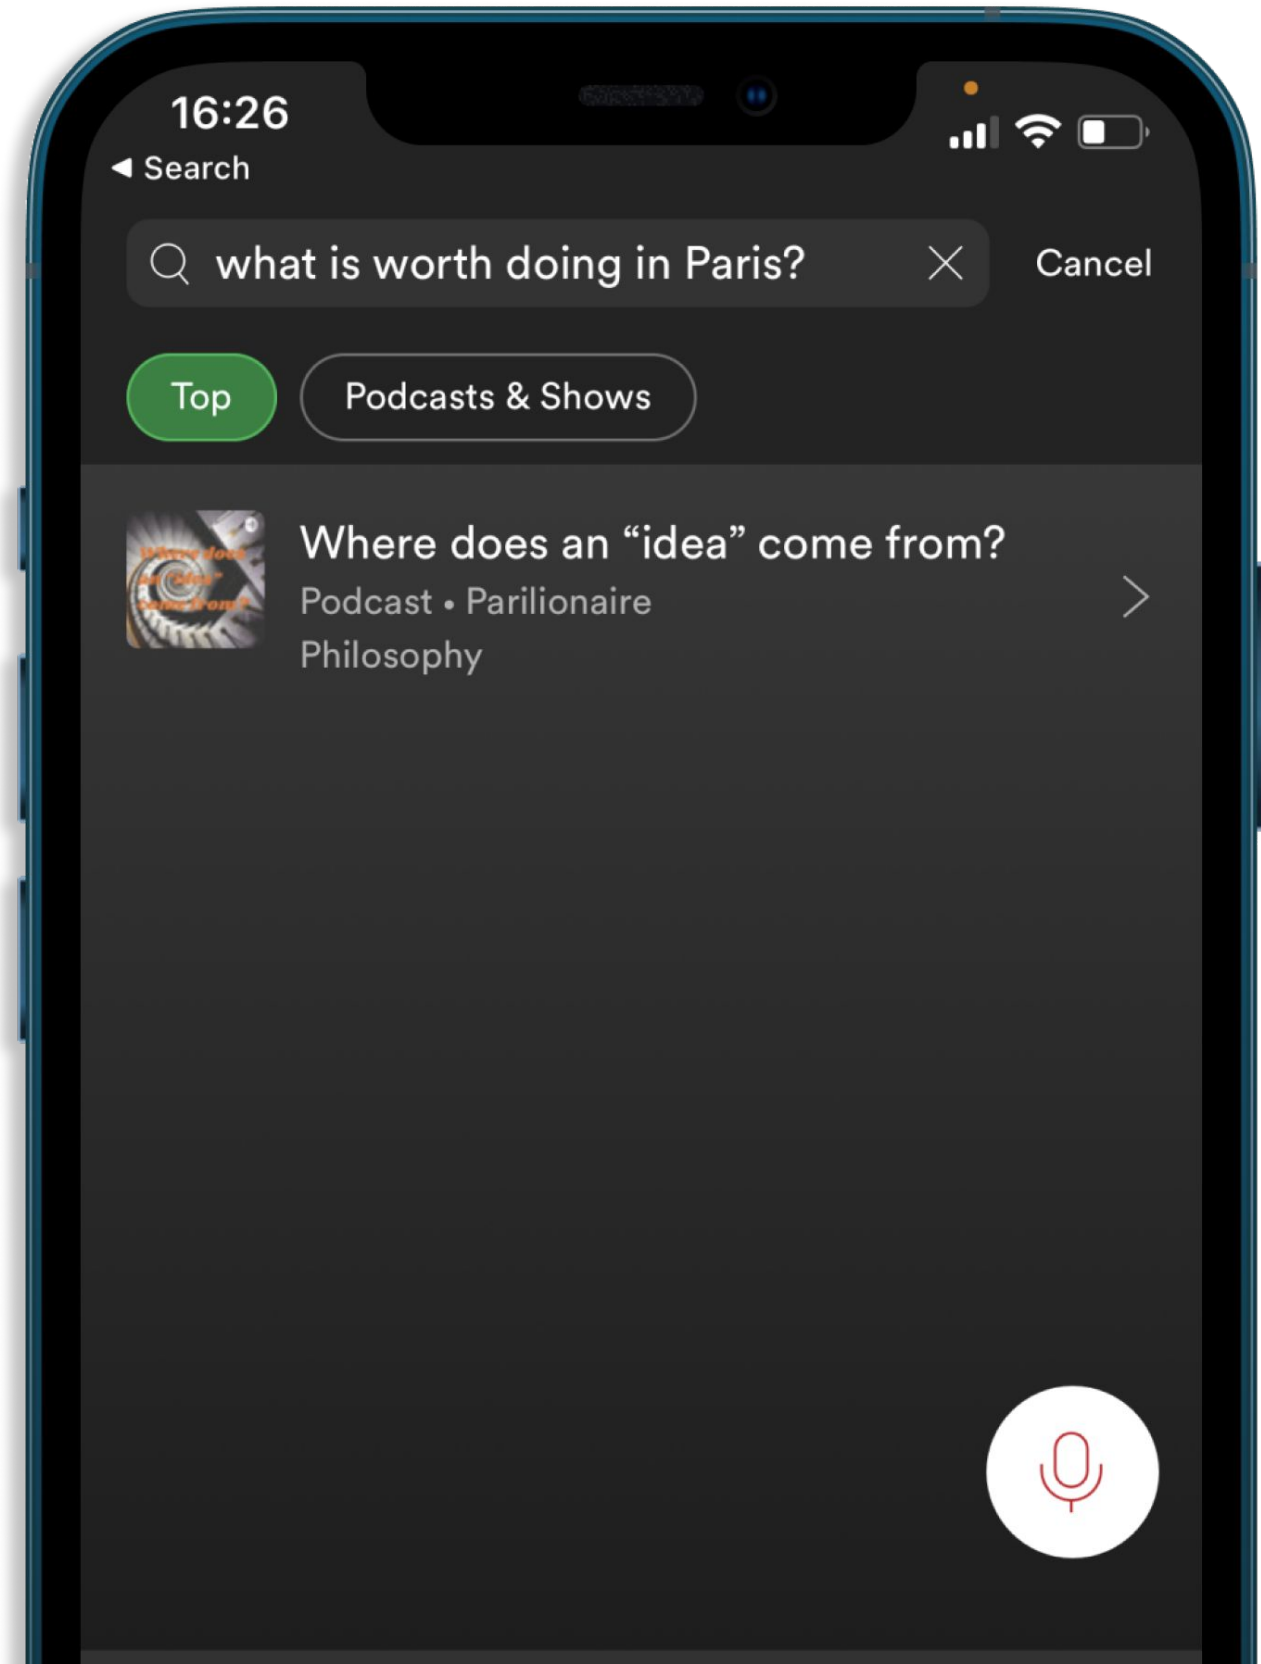

Average relative character deletions	+53%
Average query length in characters	+13%

Users may have different goals  
searching for different content types

Searching for podcast on Spotify  
requires much higher effort than music

**Term-based  
search *does not*  
cut it**

electric cars climate impact

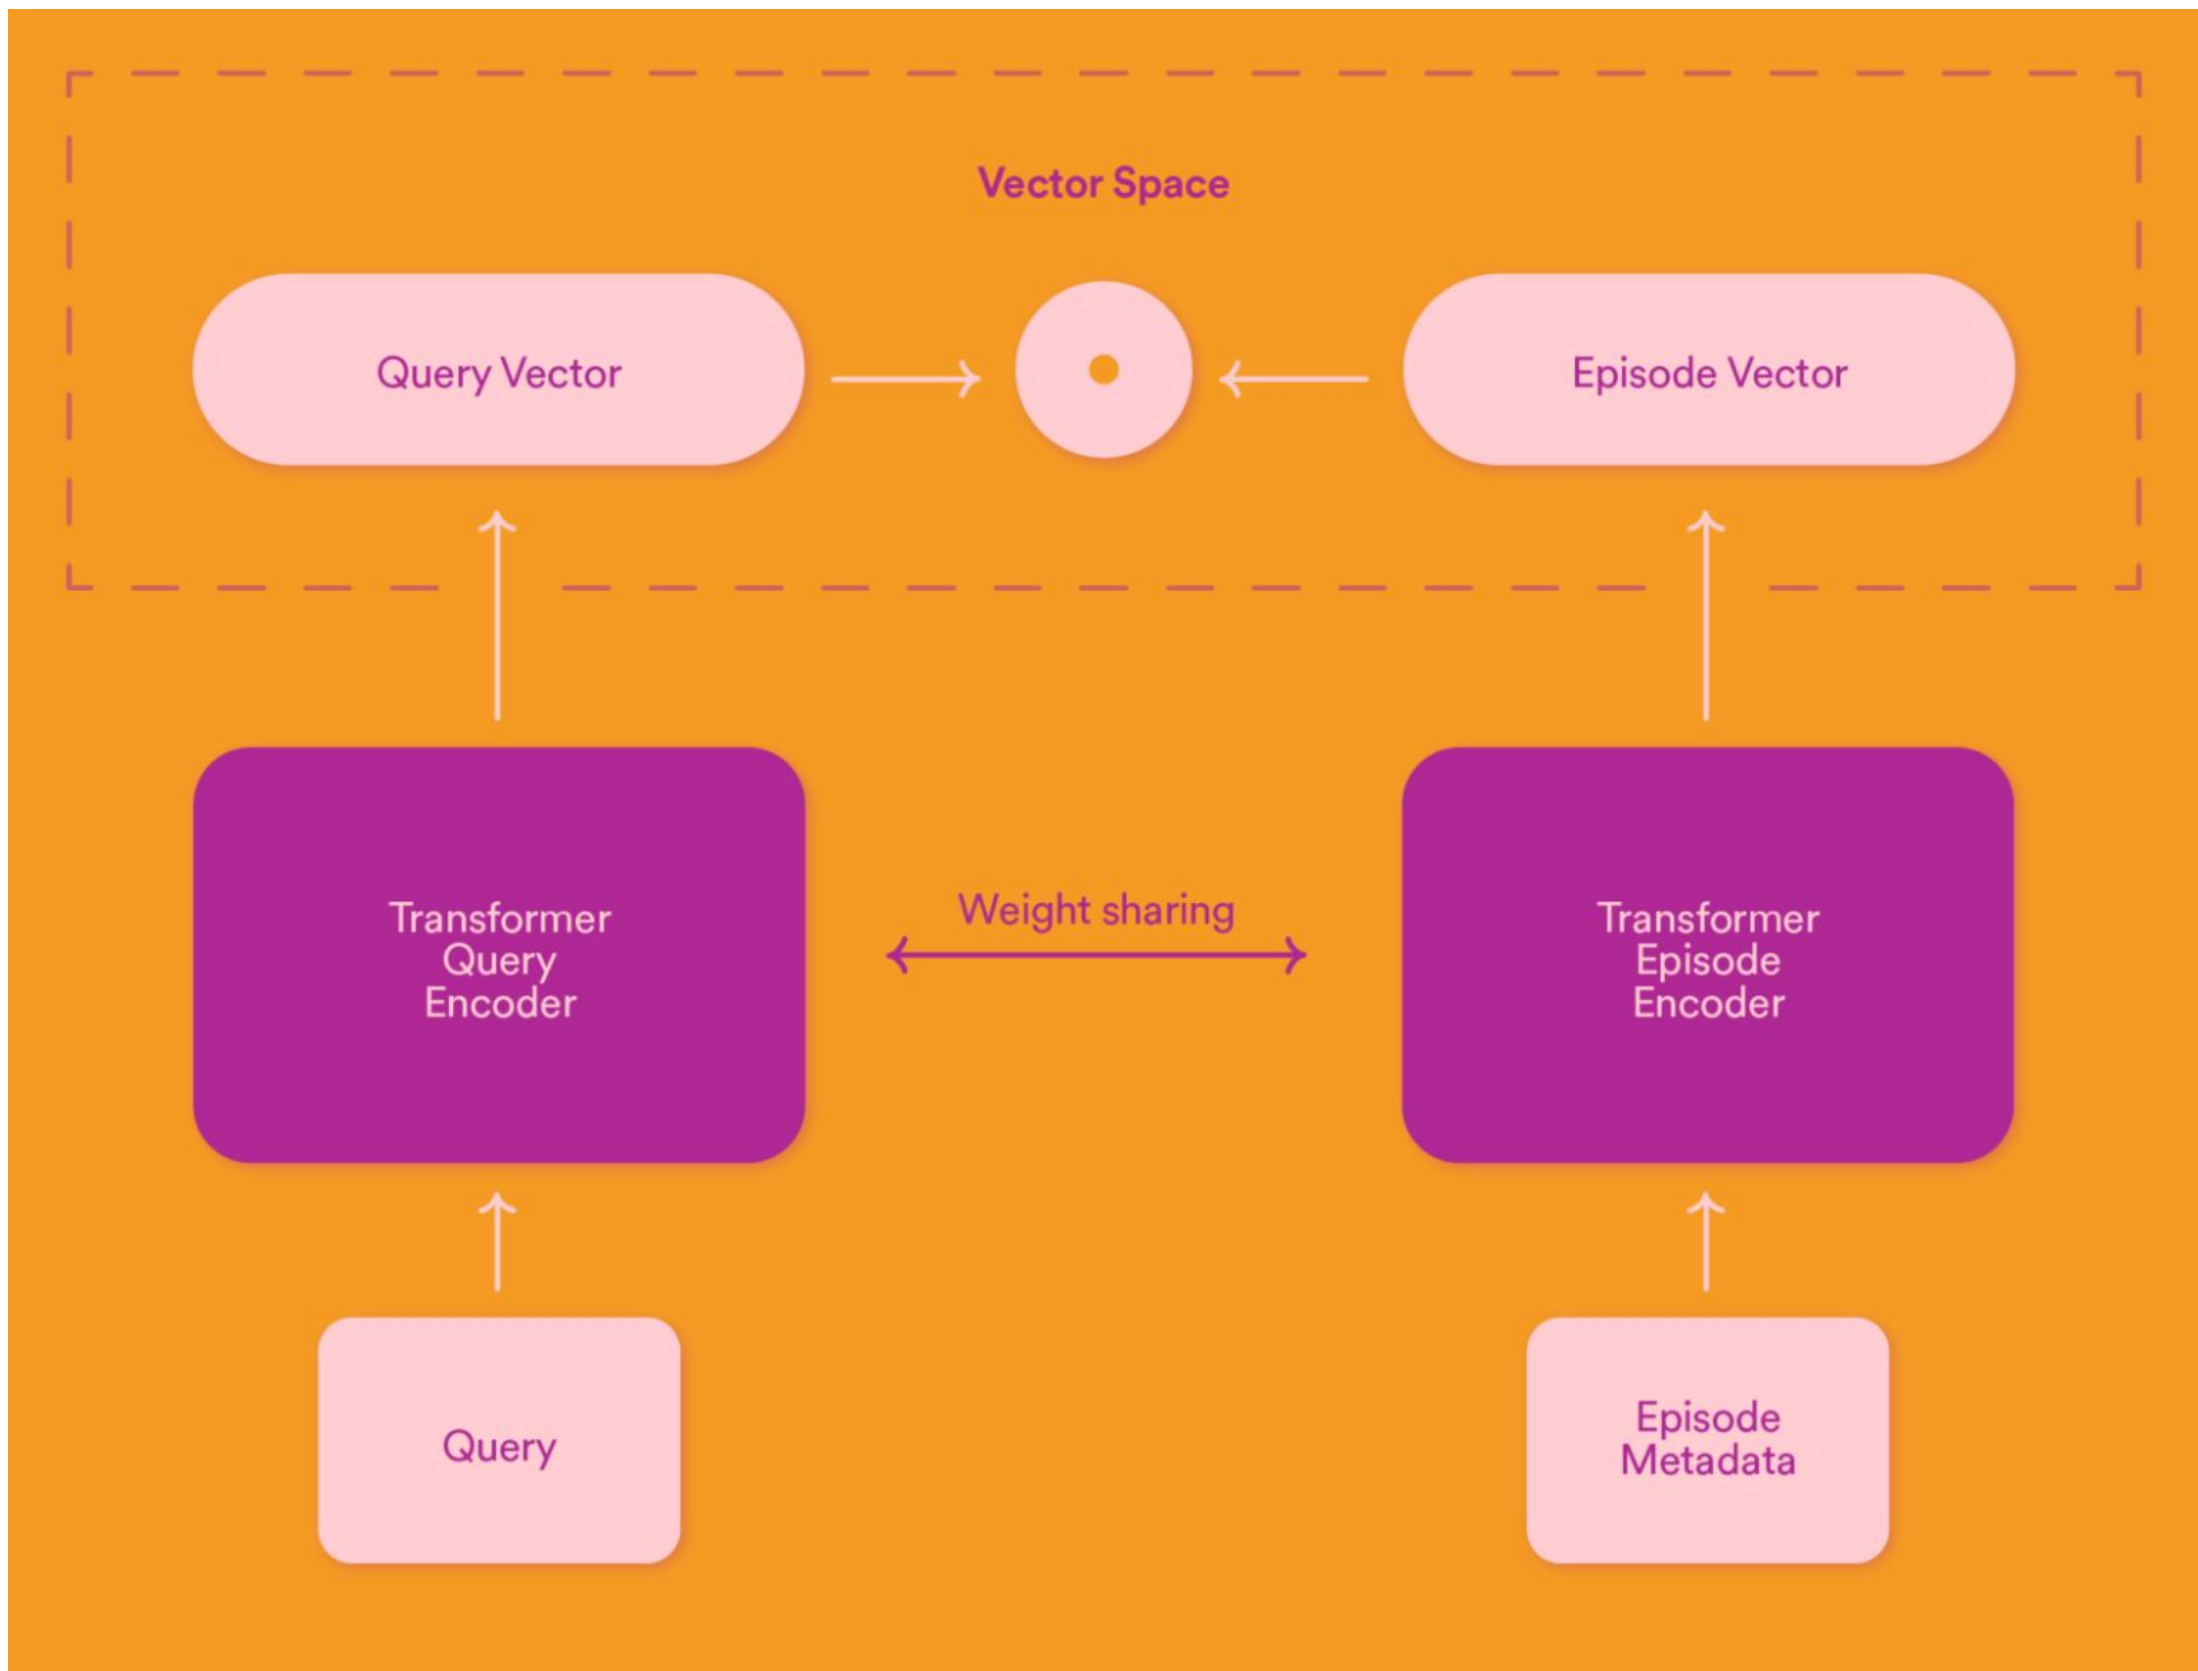

Are electric cars better for the environment?

Environmental impact of electric vehicles?

Electric cars and ecology

# Data for fine tuning

- Query/Episode pairs from **Search logs**
  - successful podcast searches
  - query reformulations
- **Synthetic** queries from popular episode titles and descriptions
- **Manually** written queries for popular episodes

electric cars climate impact

---

Are electric cars better for the environment?

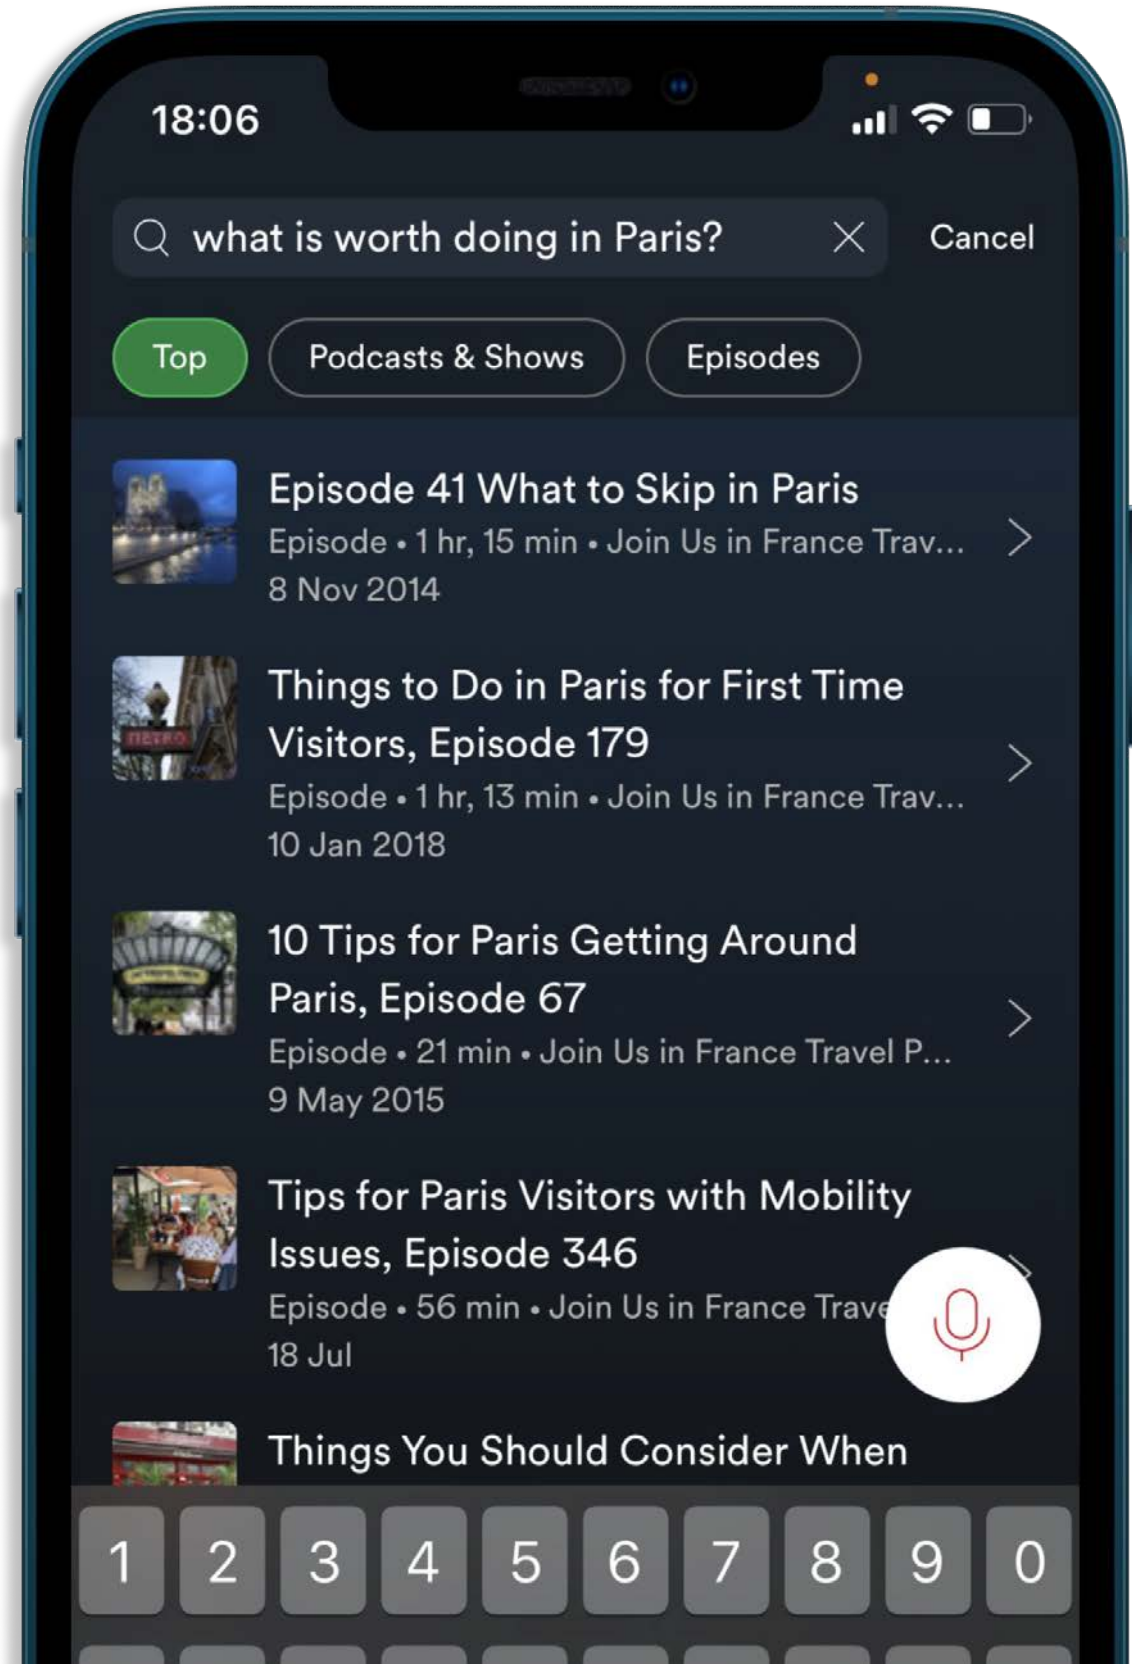

Environment impact of electric vehicles

Electric cars and ecology

# Semantic Search does cut it

**How can you help?**

# Datasets

Dive into datasets for everything from podcasts to music recommendation

<https://research.atspotify.com/datasets/>

## The Million Playlist Dataset: Learning from Music Playlists

Oct 05, 2020

Dataset for music recommendation and automatic music playlist continuation. Contains 1,000,000 playlists, including playlist- and track-level metadata.

## Spotify Podcasts Dataset: 100,000 episodes with text and audio

Apr 15, 2020

Dataset for podcast research. Contains 100,000 episodes from thousands of different shows on Spotify, including audio files and speech transcriptions.

## WSDM Cup: The Music Streaming Sessions Dataset

Nov 15, 2018

Dataset for researching how to model user listening and interaction behavior in music streaming. Also includes data for music information retrieval and session-based sequential recommendations.

## OpenMic: Audio and Crowd-Sourced Instrument Labels

Sep 23, 2018

Dataset for researching multi-instrument recognition in polyphonic recordings, a fundamental problem in music information retrieval.
