IT Leaders could be doing more to drive business innovation and growth

This opinion piece has been written by a working group of the BCS IT Leaders Forum who, through their extensive experience and insight, perceive a strong case for promoting IT Leaderpreneurship both from the point of view of introducing a more entrepreneurial management style to improve an organisation’s innovation and growth as well as offering career opportunity, greater job satisfaction and reward to IT leaders. This piece reflects the personal opinion of the authors and in no way reflects the official opinion of the BCS.

Leading contributors: Colin German B.Sc. MBA (eBusiness) FBCS and Dr Stephen Castell CITP CPhys FIMA MEWI MIoD with contributions from Dr David Miller FBCS FIET FCIM CITP CEng and the working group was chaired by Shakeeb Niazi FBCS CITP FIOEE FIET.

IT Leadership and its evolution

As computer technology, software and systems were introduced into organisations, the IT leadership role was created as one that focuses on the technology and follows the organisation’s needs. However, in those early days where pre-trained IT resources were not available, it was common practice to seed the IT departments with business people who would train to become IT professionals. This helped to address the shortage of trained IT people but it also broadened the impact of IT away from the traditional focus of accounting applications. By contrast, organisations have now evolved and today technology is not simply a ‘servant’, but a differentiator, a tool for competitive advantage, a disruptor and actually a business driver in itself. However, the IT leadership role, or rather the way it is frequently seen, has not necessarily evolved in the same way. It is now time to encourage your technical leadership to drive enterprisingly forward into the business.

IT leadership usually entails inventiveness (solving a problem using technology) and innovation (doing things differently or doing different things). To date, inventiveness and innovation may have only been principally focused on managing the technology itself, or on its application to business, and how the business operates within its commercial and social context. However, and not least because of increasingly widespread and growing ‘digitalisation’ generally, the way we do business is either already, or is becoming, fundamentally different. Businesses need people with ‘digital domain’ knowledge and vision to see how things can work differently. IT leaders with a flair for understanding business opportunity, and how it may be exploited, become important, if not vital, to the successful development and growth of their organisations and enterprises. The IT leader who has the experience, technical knowledge, and entrepreneurial business vision, and who can conceive and implement successful new business opportunities and ventures, we have termed “Leaderpreneur”.

The next level – IT Leaderpreneurs

A leaderpreneur may be focused on transforming the core business, be capable of creating new lines of business or opportunity which can be spun off from the core business, or may take an idea away and develop it independently (or resource, encourage, motivate and/or manage others to do so). The Leaderpreneur can easily end up becoming a mentor or facilitator for young entrepreneurs and new startup businesses, whether within the IT Leader’s own organisation or externally. Leaderpreneurs are therefore not just a combination of IT leadership and entrepreneurship but trainers and mentors for the IT and business leaders of the future.

IT leaderpreneurship is vital in businesses for a number of reasons:

1. **Competitiveness** - It promotes the development of innovative ideas and products, helping businesses stay ahead of the curve in a rapidly evolving technological landscape;
2. **Coordinating complex teams** - IT Leaderpreneurs are able to bring together a diverse range of skills and perspectives, creating teams that are both creative and effective; and
3. **Developing future IT Leaders** - By encouraging entrepreneurship and innovation within organisations, IT Leaderpreneurs foster a sense of purpose and motivation amongst their colleagues and employees.

The encouragement, resourcing and promotion of IT leaderpreneurship within organisations clearly could and should deliver great value; however, its development faces challenges, and begs a number of questions or points to ponder, for example:

1. Where the IT has been totally outsourced there will be a reluctance amongst the business people to discuss future business plans with third parties driven by concerns over competitive advantage, confidentiality and disclosure. Is it wise then to outsource what has become such a critical resource?
2. Technical Leaders are the experts in technology within an organisation if not outsourced. It is frequently the case, however, that they are still not consulted in the preparation of organisation plans but they are presented with a fait-accompli and told what should be delivered. What can be done to convince top management that technical leaders should be part of the organisation planning process from the start?
3. Technical Leaders frequently have great ideas regarding where technology can take the business, how processes and delivery can be improved using technology and how business results can be better driven through technology. Should there be a focus then on training Technical Leaders on how to pitch and promote such ideas to the right audiences?
4. Businesses work against a strategic plan that has strong financial elements. Do Technical Leaders routinely have access to this when developing their future analyses and proposals to Boards or to top management?
5. When creating, developing and presenting a project or an innovation, Technical Leaders are able to give many detailed technical reasons why the project would be beneficial to the business. When pitching this to Business Leaders, such suggestions typically fall on deaf or uncomprehending ears and they fail to invest. If not the presentation or the lack of awareness of the business strategy, why else could this be happening and what can be done about it?

The case for promoting IT leaderpreneurship therefore needs to focus on emphasizing and supporting the technical vision and leadership of IT leaders while ensuring that this vision is not only aligned, but also fused, with the organisational strategy. It is also a matter of educating IT leaders in
business, finance and presentation skills, while revealing to organisations the value that can be
realised by giving more prominence to IT leaders at higher organisational levels.

Some tangible actions...
Developing IT Leaders into Leaderpreneurs and harnessing the IT Leaders’ technical and
entrepreneurial skills requires concerted action from multiple angles. Some aspects here could be:

- **Make IT Leaderpreneurship a job requirement** - Company Boards, and Company HR
  Functions, should add ‘IT Leaderpreneurship’ to CTO and IT Team Leader job roles and
  specifications in order to ensure that the IT Leadership is fused with entrepreneurship. This
  would result in employing technologists who can see business opportunity can lead and
  speed up the digitalization and transformation of the business to realize the opportunities
  these bring.

- **Develop Leaderpreneurship qualities** - IT professionals should actively promote their IT
  Leaderpreneurship awareness and talents, seeking encouragement and responsibility, and
  trial projects, to exercise and develop skills and experience in order to better prepare
  themselves to add value to their companies and to society as a whole.

- **Supplement IT studies with entrepreneurship** – Educational institutions teaching IT
  qualifications should consider supplementing these with business or entrepreneurship
  modules and other professional bodies could be engaged to undertake reciprocal mentoring
  of IT Leaders in order to start to create an awareness of business strategy, management, and
  organisational behaviour theories that the IT Leader will use as a foundation to develop
  Leaderpreneurship traits.

- **Leaderpreneurship awareness by Professional bodies** - Management and Technology
  professional bodies, such as the British Computer Society, the Chartered Management
  Institute and the Institute of Directors should seek to educate, promote and encourage, IT
  Leaderpreneurship for the good of business, the economy and society.

The ultimate level – The Business IT Leaderpreneur

Ultimately, enlightened businesses will foster the most business-focused IT leaderpreneurs to
prepare them for a career move into innovative business management and development.

In conclusion, IT Leaderpreneurship has the potential to drive significant innovation and growth to
organisations across a range of industries. A lot needs to be done from multiple angles in order to
grow these traits. By nurturing and supporting IT Leaderpreneurs, we can help create a more
dynamic and entrepreneurial business landscape, which will ultimately benefit society as a whole.
