

PROFESSIONAL REGISTRATION RECOGNISING YOUR SKILLS

As part of our partnership with BCS, The Chartered Institute for IT, you can apply for professional registration to complement your BCS membership.

When you become professionally registered, you benchmark your knowledge and competence against a recognised standard and gain independent endorsement of your skills and credibility in the industry.

BCS awards the following registrations, all aligned with the global SFIA skills framework:

Registered IT Technician (RITTech) recognises the professionals who design, build and maintain our digital world - that's developers, programmers, help desk technicians, project managers, testers, digital marketers, analysts, cyber experts, architects, administrators, to name just a few!

Chartered IT Professional (CITP) status represents the highest standard of competence and conduct in the industry, instantly demonstrating to employers, clients and colleagues the value you bring to your role.

Chartered Engineer (CEng) registration demonstrates that you are a highly-skilled engineer working with complex systems, delivering innovation, creativity or change through technology solutions.

Incorporated Engineers (IEng) recognises the talents of practitioners who apply current or developing to undertake engineering design, development, manufacture, construction or operation.

If you're interested in applying for any of these registrations, at no cost to you, please speak to your BCS membership coordinator.
