

**BCS THE CHARTERED INSTITUTE FOR IT**

BCS HIGHER EDUCATION QUALIFICATIONS  
BCS Level 6 Professional Graduate Diploma in IT

**WEB ENGINEERING**

Tuesday 24<sup>th</sup> March 2020 – Afternoon

Answer **any** THREE questions out of FIVE. All questions carry equal marks.

Time: THREE hours.

**Answer any Section A questions you attempt in Answer Book A**  
**Answer any Section B questions you attempt in Answer Book B**

The marks given in brackets are **indicative** of the weight given to each part of the question.

Calculators are <b>NOT</b> allowed in this examination.
---------------------------------------------------------

**Section A**  
**Answer Section A questions in Answer Book A**

**A1.**

a) Compare the following terms:

- i) HTTP and HTTPS;
- ii) Asymmetric and Symmetric encryption;
- iii) HTML and XHTML;
- iv) RSS and IRC;
- v) DES and AES.

**(15 marks)**

b) Write the CSS code to style the web page indicated in Figure A1.1. You can use the variables values shown in the figures A1.1 and A1.2 to create and style the divisions of the web page.

**(10 marks)**

**A2.**

a) Explain, with an example for each, what is meant by the following terms:

- i) Phishing;
- ii) RESTful;
- iii) WSDL;
- iv) Web profiling;
- v) E-commerce.

**(15 marks)**

b)

- i) Describe the main components of client/server architecture, with a figure depicting how these components interact with each other.
- ii) How different is P2P compared to client/server architecture?

**(10 marks)**

**[Turn Over]**

**Section B**  
**Answer Section B questions in Answer Book B**

**B3.**

- a) Data can be stored in child elements or in attributes as demonstrated by the example in Figure B3.1. Briefly state **FIVE** factors to be considered when using attributes instead of child elements.

**(5 marks)**

- b) The XML document in Figure B3.2 contains a number of errors when validated. Identify all the errors and provide a correction for each.

[Note: the line numbers are for your benefit and are not part of the XML code.]

**(5 marks)**

- c) An XML schema can be written as a DTD or as XSD (xml schema document). State the benefits and drawbacks of each approach. Convert the DTD in Figure B3.2 to an XML schema.

**(5 marks)**

- d) Write an external DTD for the XML file in Figure B3.3:

- i) The element `trainlog` may contain, in any order, one or more `session` and `progress_report` elements;
- ii) A `session` element must first contain a `duration` element, followed by a `distance` element, followed by a `location` element, followed optionally by a `comment` element, followed by zero or more `photo` elements;
- iii) The `date` and `heartrate` attributes in `session` are optional;
- iv) The `type` attribute in `session` must be present but allow only 3 values – `running`, `swimming`, `cycling` - with default set to `running`;
- v) A `photo` element must contain a `url` attribute but may not contain any text;
- vi) A `progress_report` element must contain one or more `comment` elements.

**(10 marks)**

**[Turn Over]**

**B4.**

- a) The editor of a popular online business magazine has decided to include a section on businesses for sale. This will be a free service. Registered and verified sales agents can submit details of a business for sale as an XML document which will then be rendered as an HTML page to be hosted on the magazine's web site. The editor has checked that there are no legal issues in doing this. A sample of the XML document is shown in figure B4.1 and this document rendered as a web page is shown in figure B4.2.

The businesses are separated into freehold and leasehold with details of:

- i) location,
- ii) type of business,
- iii) financial information,
- iv) business image,
- v) sales agent,
- vi) local authority, and
- vii) a brief description.

The image is to also serve as a link to a photo gallery for the business. The agent name is a link to the agent's web site and the email address is to be an active link. The style sheet to be used is already in place and is available for use with name

`business.css` .

You are to write the code that will process the XML data and render it as a web page as shown in Figure B4.2. You are advised to show the code for the following, including appropriate comments to explain how the code will work:

- i) The HTML template in which the XSL code will be embedded;
- ii) The code to display all businesses by type;
- iii) The code to display business image;
- iv) The code to make the displayed image into a link that will open another window where a photo gallery of the business will be displayed;
- v) The code to display all the agent details as shown including the agent name and the email address rendered as links.

**(20 marks)**

- b) A further enhancement that the editor would like to provide is a feature for a potential investor to make an appointment with the agent to view the business and the financial accounts. Discuss how this could be achieved; note that you are not required to code this.

**(5 marks)**

**[Turn Over]**

**B5.**

- a) Describe and differentiate between a software library and a framework citing suitable examples of **EACH** type. **(2 marks)**
- b) A software system can be built using a framework. Briefly explain the benefits and drawbacks of using a framework. **(5 marks)**
- c) Define the acronym MVC and briefly explain what each part is in relation to developing an application. **(3 marks)**
- d) Identify the optimal conditions for an MVC approach to be beneficial when designing an application. **(5 marks)**
- e) As a Web Engineer, identify at least **FIVE** major challenges in the design and development of an image-hosting site, where users can upload their images to a central server and the images can be retrieved via a web link or an API.

Initially, focus on two of the core services - the ability to upload (write) an image to the server, and the ability to query for an image. For **EACH** of the challenges identified, provide an outline solution including the technology to be used.

Your answer should be in the form of a slide presentation to the client (**FIVE** slides with bullet points). No marks will be given for answers that quote stages of SDLC (Software development life cycle).

**(10 marks)**

**END OF EXAMINATION**
