

BCS. The Chartered Institute for IT

Green IT Event Package Guidance

- When pulling together your event, please connect with other local branches or SG's (if you require help with this, please contact the policy team on policyhub@bcs.uk)
- **Green IT definition from BCS:** Green IT is using computers and their resources in an environmentally responsible and eco-friendly efficient manner. The term is largely recognised as the learning behind creating, engineering, producing, using, and disposing of computers and computing devices in a fashion that has minimal environmental effect.
- If your SG/Branch would like to speak to the Green IT group, please contact their chair:
Alex Bardell: abardell@yahoo.com
- BCS wants to enhance and continue the conversation around Green IT in the build up to and following COP26, therefore the deadline for your SG/Branch to complete your event in a box is 30.11.2022
- Regarding speakers for any events help, there is no limited specification to who you should approach if they can contribute effectively
- Please record your event (ensure you seek permission of those attending)
